Foreword

2018 marks the 11th annual HireRight Employment Screening Benchmark Survey.

HireRight gathered data from nearly 6,000 human resources professionals to harness their collective wisdom and explore key issues, trends and underlying business drivers affecting background check programs in U.S. organizations. A complete review of the methodology can be found in the “Survey Overview and Methodology” section at the end of this report.

Key themes

- **Improving job market**
  With a steadily improving job market, organizations are now competing for the most-qualified candidates and more emphasis is being placed on candidate experience.

- **“Ban-the-box” regulations**
  The types of background checks used by employers have stayed relatively consistent over the last decade, although regulations such as “ban-the-box” may have affected how the information gleaned from reports is used.

- **Global screening policy**
  Despite the world becoming more interconnected, few organizations have developed a formal global screening policy.

- **I-9 verification practices**
  I-9 verification is increasingly being facilitated by background check vendors, however, the percentage of companies prepared for an ICE audit is decreasing.

- **Marijuana landscape**
  The marijuana landscape continues to change, but organizations’ drug policies are lagging.
Outlook for 2018

Low unemployment rates and Baby Boomer retirements have created a competitive hiring market, particularly for experienced workers.

Employers of all sizes are bullish, with the majority predicting their workforces will grow, and to meet that goal businesses may modify their hiring and recruiting practices to appeal to Millennials, who approach their jobs differently from earlier generations.

2018 projected organizational change in size:
Top priorities remain constant

Viewing employees as one of their most valuable assets, most responding companies plan to invest in finding and retaining talent.

The top four areas for business investment remain unchanged from 2017:

- **59%** Finding qualified job candidates
- **58%** Keeping good employees
- **49%** Making the HR process more efficient
- **41%** Developing leaders
Talent interaction

To land top talent, employers must reexamine how they interact with candidates. In many industries, a vibrant social media presence and mobile-friendly hiring platform are essential to hiring the most-qualified candidates.

**BEST PRACTICE:** Companies that prioritize sustained growth of their workforce should take an unbiased look at their interactions with candidates, including those initiated through hiring portals and the interview process.
Planned investment for 2018

</tbody>
</table>

66% of respondents say finding qualified candidates is a challenge and 55% struggle with employee turnover. Meanwhile, for two consecutive years an increasing percentage of respondents plan to invest in developing effective employee training programs, maximizing employee engagement and creating a positive corporate culture.
Methods for ensuring a good candidate experience

While planned investment in improving the candidate experience increased from 35% in 2017 to 37% in 2018, there were significant changes in what companies are actually doing to improve it. Follow-up communication and candidate-friendly emails both decreased 9%; Mobile-friendly application/screening process decreased 3%; Nothing — this is not a priority for us increased 7%; and Other increased 2%.

The discrepancy between planned investment and the commitment to invest in the categories provided may demonstrate that employers are thinking outside of the box.

What organizations are doing to ensure a good candidate experience (2018):

- Follow-up communication for all candidates: 51%
- Candidate-friendly emails: 38%
- Mobile-friendly application/screening process: 26%
- Nothing — this is not a priority for us: 24%
- Other: 6%
The mobile generation

**Millennials, Gen X and Gen Y make up the majority of the workforce, and these “raised-on-tech” workers are frequently using phones and tablets in their job search.**

In fact, Millennials comprise the most prevalent generation in the workforce at 32%.¹ They say they interact more with their smartphones than they do with their significant others, parents, friends, children or co-workers.² Furthermore, 69% say they “couldn’t live without” their smartphone.³ And Millennials are on track to make up 50% of the workforce worldwide by 2020.⁴ Use their preferred mode of communication to best reach them.

Organizations by size that are “Somewhat to Very Likely” to add a mobile-friendly app or process within the next 12 months:

- **48%**
  - 2,500+

- **38%**
  - 500 - 2,499

- **21%**
  - 100 - 499

- **17%**
  - 20 - 99

- **14%**
  - < 20

**BEST PRACTICE:** To attract today’s talent, ensure your company’s hiring materials — including job applications — are optimized for mobile users.

Sources:
Regulations affecting candidate screening are becoming increasingly common, raising compliance concerns for HR professionals

Employers — particularly those that hire workers in multiple jurisdictions — recognize that HR legislation is not uniform nationwide. Take “ban-the-box” legislation, which mandates, in part, the removal of job application questions related to previous criminal convictions.

As of March 2018, 12 states have passed ban-the-box legislation, as have 17 cities and counties. But the rules vary significantly with respect to scope, timing, and notice. Similarly, a number of states and cities have passed pay equity laws that bar employers from asking about a candidate’s salary history, but again, the specifics of pay equity laws vary from jurisdiction to jurisdiction.

**BEST PRACTICE:** Legal counsel with expertise in compliance issues should be engaged to advise on new legislation that affects the hiring process.
These conflicting regulations, coupled with today’s litigious environment, mean companies must continually ensure they’re in compliance with all applicable laws.

Biggest compliance concerns (2018):
The most popular types of background checks

Organizations of all sizes and in every industry depend on background checks to help ensure a sound hiring decision.

Background checks performed by organizations (2018):

- Criminal or other public record searches: 84%
- Previous employment and/or references: 73%
- Identity: 66%
- Education verification: 51%
- Motor vehicle records: 50%
- Professional license/qualification verifications: 44%
- Credit history: 29%
- Social media: 14%
- Fingerprint: 13%
- Re-screening current employees: 11%
- None: 5%

3% increase in employers reviewing social media over 2017. But remember that social media can reveal information about a candidate’s age, gender, race, religion, sexual orientation and more. Declining an applicant based on a social media profile may open employers up to discrimination lawsuits.
For the 11th consecutive year, criminal searches, employment, identity, and education verifications, and motor vehicle records are the most popular types of background checks

Organizations consistently rely on criminal or other public record searches when reviewing candidate backgrounds, but also incorporate other types of job-related screening.

Financial organizations typically include a review of a candidate’s financial history. The motor vehicle records of candidates who will drive company vehicles may also be checked. Healthcare/life science businesses and educational institutions may place emphasis on review of professional licenses and credentials.

**BEST PRACTICE:** An employer should never solely base a hiring decision on their review of a candidate’s social media profile. Tailor the screening process to reflect your industry and the jobs for which you hire.
Background checks help companies hire better employees

The vast majority of employers – 84% – continue to derive significant benefits from background checks.

- Individuals with questionable backgrounds may seek out employers that don’t do background checks.
- In the event of employee violence, many states will hold an employer legally liable if it should have known an employee posed a threat to others.

Benefits of employment screening (2018):

- 53% Better quality of hires
- 47% More consistent safety & security
- 16% Improved regulatory compliance
- 19% Greater employee retention
- 19% No benefits at this time
- 23% Other
- 3% Better company reputation

**BEST PRACTICE:** Background checks can help protect the company’s reputation, which can be tarnished by employee actions as well as disgruntled employees who air their grievances on social media.
Companies strive for improved efficiencies in the hiring process

Landing top talent quickly is critical in a competitive job market, but it’s just as important to ensure a thorough screening process. With more complex candidate backgrounds – including self-employed workers, as well as those who have lived overseas – and employers’ increased emphasis on workplace safety and data security, organizations are struggling to find a balance between speed and accuracy.

Most significant background check challenges (2018):

- Reducing time-to-hire: 44%
- Improving overall efficiency in the process: 30%
- Verifying information: 27%
- Getting quality information: 25%
- Not experiencing challenges at this time: 24%
- Managing costs: 22%
- Ensuring a positive candidate experience: 21%
- Meeting regulatory requirements: 16%
- Applying screening policies consistently: 12%
- Other: 4%

Integrating an Applicant Tracking System (ATS) with the background screening system not only speeds up the hiring process, it provides an improved user experience, real-time status updates and a dramatic reduction in candidate frustration.
The vast majority of companies conduct background screening on executive-level candidates

However, some companies may think that candidates for executive-level and board positions don’t need to have their backgrounds checked, wrongly assuming that prior employers have already screened them.

**BEST PRACTICE:** Protect your company’s brand and reputation by screening high-visibility, executive-level employees.
That’s the wrong mindset

Because of the responsibilities and high visibility of executive-level employees, consider making these background checks more extensive than other background screenings. This additional layer of scrutiny can be a critical step to help protect your company’s brand and reputation.

The larger the company, the more likely it is to conduct executive-level screenings:

- 96% of companies with more than 2,500 employees
- 94% of companies with 500 to 2,499 employees
- 89% of companies with 100 to 499 employees
- 79% of companies with 20 to 99 employees
- 58% of companies with fewer than 20 employees

84% of respondents on average conduct background screenings on executive-level candidates.

7% of companies with 20 or fewer employees do not conduct background checks on executive-level candidates, but plan to, while only 1% of organizations with 2,500 or more employees stated they don’t but plan to.
Candidates at all levels — even top executives — misrepresent information on their resumes

Although resume fabrications are most common among junior-level job seekers, many senior-level executives and government officials have found themselves in the uncomfortable spotlight after it was revealed they misrepresented their experience.

Fabrications are commonplace, often centering on educational credentials:

- **84%** of respondents have found a lie or misrepresentation on a resume and/or job application — that’s up dramatically since 2012, when 66% reported finding fabrications.
- **23%** of respondents say background checks have revealed misrepresentations in educational credentials.

- A newly-hired high school principal resigned after her school’s journalism students found she’d claimed two degrees from a university that closed years before she supposedly graduated.
- The head of a city housing authority was terminated after the agency’s board realized he couldn’t keep his story straight when discussing degrees he allegedly earned.
- A government appointee withdrew his nomination after allegations of resume padding; the nominee blamed the discrepancies on a tornado that hit his prior employer.
- A state agency hired a new spokesperson despite knowing he’d fabricated information on his resume — a fact that thrust the agency into an uncomfortable spotlight once the media learned of the situation.
Periodically rescreening employees protects co-workers and customers, as well as the company and its reputation.

Financial problems, the loss of professional licenses, and recent criminal history are just some of the issues that might surface during the rescreening of employees. But despite the benefits of rescreening, many organizations haven’t embraced the idea.

Who is rescreened post-hire? (2018):

<table>
<thead>
<tr>
<th>Category</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not rescreen post-hire</td>
<td>52%</td>
</tr>
<tr>
<td>Employees who are promoted or changing roles</td>
<td>19%</td>
</tr>
<tr>
<td>Other</td>
<td>16%</td>
</tr>
<tr>
<td>Employees with no status change</td>
<td>11%</td>
</tr>
<tr>
<td>Contingent and/or contract workers</td>
<td>10%</td>
</tr>
<tr>
<td>Temporary workers</td>
<td>9%</td>
</tr>
<tr>
<td>Volunteers and/or unpaid workers</td>
<td>2%</td>
</tr>
<tr>
<td>Vendor representatives</td>
<td>2%</td>
</tr>
</tbody>
</table>

48% of respondents in 2017 said they do not rescreen workers post hire. This increased to 52% in 2018 which harkens back to 2013 when 53% of employers said they do not rescreen.

19% of those organizations that rescreen, do so when employees are promoted or change roles. Only 10% rescreen contingent and/or contract workers — the same as 2017, but down from 31% in 2013.
Slightly more than half of organizations that conduct background checks beyond the U.S. have policies guiding how global verifications are conducted

When asked why they don’t screen globally, 40% said it’s because they don’t have workers with global work experience or education.

Only 16% of respondents said they verify international backgrounds of U.S.-based employees; 15% said they screen employees based outside of the United States — a 2% increase since last year, yet still 4% fewer than 2016.

BEST PRACTICE: The percentage of foreign-born U.S. workers is small — only 27 million people, or about 17% of all workers — but growing. (There were 23 million foreign-born workers a decade earlier.) This growth underscores the need for employers to have a comprehensive global screening policy for candidates who were born, lived, were educated or worked abroad. Companies should also anticipate that these complex background checks may take longer than those for candidates who have resided only in the United States.

Sources: https://www.bls.gov/news.release/forbrn.nr0.htm
Global verifications

What is your process for screening candidates who have lived, worked or received their education internationally? (2018):

- 40% We do not have workers with global work experience or education
- 23% We conduct global criminal checks
- 16% We conduct global work experience/reference checks
- 15% We conduct global education checks
- 13% We conduct global identity checks
- 9% We do not conduct global checks due to screening providers’ lack of global reach
- 8% We do not conduct checks because we think the risk is low
- 6% We do not conduct checks because it is cost prohibitive
- 5% We conduct other types of global checks: credit, etc.
- 3% We do not conduct checks due to limited manpower to screen globally
- 10% Other

The most significant challenges associated with screening job candidates in non-U.S. locations include (2018):

- 30% No significant challenges at this time
- 27% Difficulty understanding laws by country
- 24% Difficulty sourcing information
- 20% Cost is too high
- 13% Issues maintaining quality of the candidate experience
- 13% Lack of manpower to conduct and/or support screening
- 12% Unable to find the right screening provider
- 11% Lack of cultural acceptance
- 10% Business priorities are not focused on global screening
- 8% Other
Companies continue to adopt digital tools, such as E-Verify, to confirm candidates’ employment eligibility

Eleven years ago, 72% of respondents said they used paper I-9 forms, and six years ago, 56% said they did. That percentage continues to drop, now down to 42% as more organizations move to electronic I-9s or a combination of both electronic and paper versions.

Most organizations feel prepared for an ICE inspection, although only 29% have actually been through an audit in the last three years.

Has your organization been through an audit for I-9 documentation in the last 3 years? (2018):

- 71% No
- 17% Yes, by a third party auditor
- 8% Yes, by a government auditor
- 4% Yes, internally

Does your organization use E-Verify? (2018):

- 30% Yes, when required by law
- 45% Yes, voluntarily
- 6% Yes, by a third party auditor
- 20% No, but planning to

**FACT:** Employers that knowingly hire and employ an ineligible employee face fines ranging from $375 to $16,000 per violation. Companies that fail to comply with Form I-9 recordkeeping requirements can be fined $110 to $1,100 per violation.

*Source: U.S. Immigration and Customs Enforcement (https://www.ice.gov/factsheets/i9-inspection)*
An overwhelming number of companies that employ contingent, contract or temporary workers screen these individuals.

Is the gig economy on the decline? Last year, nearly a quarter of respondents said 40% or more of their workforce is comprised of non-employees; this year, only 16% of respondents said that non-employees constitute 40% or more of their workforce. However, more organizations are screening these workers.

**BEST PRACTICE:** Don’t be complacent in screening simply because a seasonal worker won’t be with the company for long. With access to facilities, data, and inventory, these workers pose significant risks to businesses, making it worth investing in comprehensive background screenings.
The majority of companies are not fully prepared to comply with the EU’s GDPR

If an employee resides in the European Union, even if he or she is not an EU citizen, the employee is afforded the rights and protections of the GDPR.

All companies, regardless of size and location, that collect personal information of EU residents must comply with the General Data Protection Regulation (GDPR), which strictly governs how personal data is collected, used, protected and retained. Certain types of data deemed sensitive — such as physical and mental health information, and criminal history — are subject to more stringent protections.

FACT: GDPR penalties are steep. Companies found to have committed serious violations face fines of up to €20 million or 4% of the company’s worldwide gross annual revenues. Fines are cut in half for lesser violations.

Urine testing is the most commonly used form of drug test – and continues to grow in popularity

Drug and alcohol screening tests remain a prominent part of the background check process, with 63% of responding organizations conducting this type of screening. That rate has remained relatively consistent over the last 10 years, except for an uptick in testing in 2012 and 2013 (78%).

Does your organization use an electronic chain of custody (eCOC) form? (2018):

- Yes: 51%
- No plan at this time: 42%
- No, but plan to: 7%

Commonly used types of screening (2018):

- Urine: 95%
- Oral fluid (saliva): 11%
- Hair: 7%
- Other: 3%

**BEST PRACTICE:** Although urine testing is the most common form of drug testing — and the only one approved for federally mandated drug tests — it’s not foolproof, but no drug test is. Companies should evaluate the pros and cons of each type of drug test to determine which is best for their purposes.
Organizations continue to grapple with policies regarding marijuana use

Six years ago, 79% of respondents said they did not have a policy nor had plans to create a policy addressing medical use of marijuana. Today, 67% of respondents do have a medical marijuana policy.

Although marijuana remains illegal under federal law, 29 states plus the District of Columbia have now legalized the use of medical marijuana, and nine states plus Washington, D.C., have legalized the recreational use of marijuana. But organizations continue to struggle addressing marijuana use among employees and candidates, with 22% citing medical marijuana use as one of their biggest compliance challenges.

Policy when a candidate is positive for marijuana on drug test and is a medical marijuana user:

- **38%** We do not accommodate at all
- **33%** We do not have a medical marijuana policy
- **17%** We accommodate it on a case-by-case basis in states where we have to
- **6%** Other
- **4%** We universally accommodate it in the states where we have to
- **2%** We accommodate it in every state whether or not the state mandates

**BEST PRACTICE:** For specific information concerning medical marijuana laws in each state in which your company operates, contact your legal counsel. The National Conference of State Legislatures, NORML and ProCon.org offer resources and talking points.
The excuses for failing drug tests are far and varied—and sometimes quite funny. Here are a few of the most imaginative:

- “I didn’t know it would show up.”
- “How long does weed stay in your system? Can I come back at the end of the month and try again?”
- “Someone threw a bag of marijuana on a bonfire.”
- “The pot pie I had at Thanksgiving must have had pot in it.”
- “I had to drive through the state of CO and had my windows down.”
- “I ate a muffin or bagel (or 96!) with poppy seeds.”
- “I spent $100 to clean up my test and it didn’t work!”
- “I fell into a vat of cocaine.”
Survey Overview and Methodology

The 2018 HireRight Employment Screening Benchmark Survey, conducted between August 14 and September 9, 2017, is the largest of its kind, and includes responses from nearly 6,000 human resource professionals (from small-, medium- and large-sized firms worldwide) knowledgeable about employment screening and recruiting. This report provides valuable insight into best practices and industry trends that may help human resources professionals create more comprehensive and effective hiring policies and procedures. The information included in this report reflects information provided by U.S.-based organizations only. Survey questions included multiple choice, multiple selections, and open text. Figures may not add up to 100 percent due to rounding or multiple-selection questions.

Organization Size (number of employees)
